5. Applications

The Grundfos circulator pumps, series UP(S), are specifically designed for heating systems. The pumps are also suitable for recirculation of hot domestic water and for circulation of liquid in cooling and air-conditioning systems.

Heating systems

Common uses:

- Boiler/hydronic
- ground-source
- radiant floor
- hydronic and fan-coil
- solar
- heat recovery.

Pump types with a cast iron pump housing are generally used for pumping water or water/glycol mixtures in these closed-system applications. However, when water conditions are not compatible with cast iron, we recommend the use of bronze or stainless steel.

Optional variable-speed and mixing-reset controls are available to customize heat output versus heat demand for increased comfort.

Domestic hot-water systems

Common uses:

- Solar water heating
- hot-water recirculation
- domestic hot-water heating.

Pump types with a bronze, brass or stainless steel pump housing are used for pumping potable water in these open-system applications.

Optional timer and thermostat controls are available to limit pump operation to periods when hot water is required and to save energy.

Cooling systems

Common uses:

- Chilled-water pumping.

We recommend that you use pump types UP(S) 25, 26, 43, 50 and pump housings compatible with the pumped liquids for chilled water due to their motor construction which is suitable for 32 °F (0 °C) water.

Construction

The UP(S) pumps are of the wet-rotor type, i.e. pump and motor form an integral unit without a shaft seal and with only two gaskets for sealing. The bearings are lubricated by the pumped liquid.

The pumps are characterized by these features:

- Ceramic shaft and radial bearings
- carbon thrust bearing
- stainless steel rotor can and bearing plate
- impeller of corrosion-resistant material
- pump housing of cast iron, bronze or stainless steel.

Installation

The pump must always be installed with the motor shaft in horizontal position. See fig. 3.

Proper installation of the pump will have the terminal box located to one side of the pump or the other with the conduit entry down.

UP(S) pumps can be installed in both vertical and horizontal lines.

UP(S) pumps are intended for indoor use only.

Fig. 3 Acceptable pump positions

Motor

The motor is a 2-pole, asynchronous, squirrel-cage PSC (permanent split capacitor) motor with UL, CUL, ETL and CSA approvals.

UP(S) pumps are available in single-phase 115 V and 230 V versions with one or three speeds.

The terminal box is easily accessible and has functional cables connecting conductors or terminals.

Insulation class(es): F, H.

The motor incorporates thermal overload or impedance protection. Therefore, no external motor protection is required.

UP models are single-speed pumps.

UPS model pumps are multi-speed pumps, and the speed can be changed by means of a speed selector switch located on the front of the terminal box.

To access the speed selector switch for UPS 15-35 and 15-55 TLC models, first remove the timer box lid.

UP models with VS or MR suffixes are variable-speed pumps with integrated control.

Depending on the pump model, motor horsepowers range from 1/25 to 1/6 and power consumption from 5 to 385 W.

Pumped liquids

Depending on the type, Grundfos circulator pumps are designed for the following liquids:

- Potable water
- non-potable water
- water-glycol mixtures
- chilled water
- domestic hot water
- softened water.

If the circulator pump is used for a glycol mixture with a higher viscosity than that of water, the hydraulic performance of the pump will be reduced.

Example: 50 % glycol at 68 °F (20 °C) means a viscosity of approx. 10 cSt and a reduction of pump performance by approx. 15 %.

When selecting a pump, the viscosity of the pumped liquid must be taken into consideration.

Ambient and liquid temperatures

UP(S)

The maximum allowable water temperature is determined by the ambient air temperature as shown in the table below.

| Maximum water temperature | | | | | |
|--|--------------|--------------|-------------|-------------|-------------|
| Ambient [°F (°C)] | 104 (40) | 120 (49) | 140 (60) | 160 (71) | 175 (79) |
| Water, all cast iron [°F (°C)] | 230 (110) | 220 (104) | 210 (99) | 190 (88) | 175 (79) |
| Water, all bronze and stainless steel | 220 (104) | 210 (99) | 190 (88) | 175 (79) | |
| The pump models below are exceptions to the temperatures listed above: | | | | | |

| UP 26-116 [°F (°C)] | 150 (66) | 140 (60) | - | - | - |

Note: This table refers to all standard products without timer, control options or other special features.

- If the UP pump is equipped with a timer, the maximum liquid temperature is 150 °F (66 °C).
- Temperature requirements for pumps with timer, control or other special features may be found on their technical data page. See section [Technical data](#), pages 45-88.

The ambient temperature for standard pumps with a permissible liquid temperature from 36 °F (2 °C) to 230 °F (110 °C) must always be lower than the liquid temperature as condensation may otherwise form in the stator housing.

ALPHA2, ALPHA1

Ambient temperature: 32 °F (0 °C) to 104 °F (40 °C).
Liquid temperature: 36 °F (2 °C) to 230 °F (110 °C).

To avoid condensation in the control box and stator, the liquid temperature must always be higher than the ambient temperature. In domestic hot water systems, keep the liquid temperature below 149 °F (65 °C) to eliminate the risk of lime precipitation.

| Ambient temperature [°F (°C)] | Liquid temperature | |
|-------------------------------|--------------------|-------------------|
| | Minimum [°F (°C)] | Maximum [°F (°C)] |
| 32 (0) | 36 (2) | 230 (110) |
| 50 (10) | 50 (10) | 230 (110) |
| 68 (20) | 68 (20) | 230 (110) |

| 95 (35) | 95 (35) | 194 (90) |
| 104 (40) | 104 (40) | 158 (70) |

Note: The maximum glycol concentration with clean water is 50 % glycol @ 36 °F (2 °C). A hydraulic performance change can be expected.

Maximum system pressure

145 psi (10 bar).

Minimum inlet pressure

The required minimum inlet pressure must be available at the pump inlet. The pressure required at the inlet of the pump is a function of the temperature of the water as shown in the tables below.

UP 10-16 Comfort PM, PM Auto, PM Temperature

The UP 10-16 pump is designed for recirculation of domestic hot water in single-family homes with dedicated hot-water return piping. Utilizing a low-noise permanent magnet motor, energy consumption is reduced to as little as 6 W. Selecting the Auto mode ensures that the pump runs only when required. The result is maximum comfort - no waiting for hot water plus decreased water and power consumption.

Fig. 4 UP 10-16 APM BU/LC

Applications

- Domestic hot-water recirculation systems in single-family homes
- small heating systems.

Pumped liquids

- Domestic hot water
- softened water
- clean water.

The pump uses two temperature sensors, one within the pump and the other connected to the pump by a cable installed on the hot-water flow pipe. The pump is installed in the hot-water return pipe.

UP 10-16 A/T/PM pump with built-in temperature sensor

Three operating modes

100 % mode

- The pump will operate 24/7/365 continuously at full speed.

Temperature mode

- The pump will keep the water temperature within an automatically detected range.

Auto mode

- The pump will learn, store and adapt operating times to domestic hot water consumption patterns.

Disinfection and flushing

- Once a week, a disinfection function is run for 15 minutes. If a higher temperature is measured at another time of the week, the disinfection function will run at this time.
- After eight hours of no operation, the pump automatically flushes the circulation pipe for 15 minutes.

Vacation feature

If no tappings are detected within a 24-hour period, the pump will automatically switch to standby mode (except for disinfection) and reactivate to the same consumptive pattern when two tappings occur within a 20-minute time period (self-modulation).

Motor

The motor has a single-phase, 12-pole, permanent-magnet design and is double insulated. No additional motor protection is required.

Maximum system pressure

145 psi (10 bar).

Ambient and liquid temperatures

The ambient temperature must always be lower than the liquid temperature as otherwise condensation may otherwise form in the stator housing.

Liquid temperature: 36 °F (2 °C) to 176 °F (80 °C).

We recommend that you keep the operating temperature as low as possible (e.g. 140 °F (60 °C)) to avoid calcium precipitation.
