MLE is a dedicated motor-drive system for pumps and other applications. Pumps equipped with MLE motors overcome application challenges and save energy in a variety of pump installations in order to reach the lowest Life Cycle Cost (LCC) possible.

Integrated drives

Integrated drives are beneficial because they are installed on non-controlled pumps at no additional installation cost. Once the power supply is connected and the pump is fitted into the pipe system, they are ready to operate at the desired setpoint.

Operating pumps with MLE also reduces CAPEX (capital expense) of additional cabinets, components and facility space by having the entire pump system in line with the pipe system.

MLE is the result of Grundfos' efficient motor technology and it is an efficient IE5 motor, with an efficiency much higher than NEMA Premium, which minimizes OPEX (operating expense).

Robustness throughout the system

The Grundfos full line supply of components, from the power supply to pipe fittings, provides the most robust solutions:

- Built-in protection against power supply disturbances, environment and motor load.
- MLE is designed to mitigate bearing currents.
- No cooling fans in drive (wear part).

MLE product range

| | |
|---------------|---------------|
| 1 x 200-240 V | 0.33 - 2.0 HP |
| 3 x 200-240 V | 1.5 - 7.5 HP |
| 3 x 440-480 V | 0.33 - 15 HP* |

* Up to 30 HP available with different specifications.

Features and benefits

| Feature | Benefit |
|---|--|
| Application control | |
| Control modes | Easy commissioning to match system design criteria. |
| Multipump function including alternating, back-up, or cascade | Neglects the need for external controllers and continuous operation by redundant pump and sensor if either component fails. |
| Differential pressure or temperature with 2 sensors | Lower CAPEX by common inexpensive sensor types. |
| Pump curve adjustments and run at power limit | Stabilizes unstable pump curves and extends operating range. |
| Setpoint influence | Adapts QH to internal or measured values. |
| Energy saving for lower OPEX | |
| AUTOADAPT or FLOWLIMIT | Continuously adapts to the most efficient curve and reduces pressure loss in the system. |
| Low-flow stop function | Improved energy optimization and comfort. |
| ECM motor that exceeds the NEMA Premium efficiency levels | ECM motors have significantly lower motor loss than NEMA Premium motors. This alone reduces energy consumption by 10 % with a typical pump load profile. |
| Condition monitoring | |
| Limit Exceed function | Any value can be supervised to protect the system. |
| Loss of prime and dry run | Protects the shaft seal. |
| Cavitation protection | Protects the impellers. |
| Flow estimate and heat energy monitor | Monitoring of the heating system's performance. |
| Overload and temperature | Protects the frequency converter and motor. |
| Stop at minimum speed | Protects the pump and saves energy. |
| Motor bearings monitors | Ensures uptime by preventive maintenance. |
| Robustness | |
| Operating temperature between -4 and +140 °F | Allows installation almost anywhere and high margins in control rooms, resulting in longer product service life. |
| Impulse transient resistance (VDE0160 compliant) | Resistance against lightning, ESD, switching impulses and utility fault clearing. |
| Interruptions and voltage sags (SEMIF47 compliant) | Keeps process running and derates the pump to the available power. |
| Line harmonics resistance (EN 61000-4-13, class 3) | Built-in compensation of disturbance to avoid overheating of motor windings and maintaining a steady pump operation. |
| Built-in RFI filters | Neglects the need for external components. |
| NEMA3 / NEMA4 enclosures | Installed in-line to pipe systems at no added cost. |

Grundfos iSOLUTIONS

Grundfos iSOLUTIONS delivers the optimal combination of pumps, drives and auxiliary components for the specific application, incorporating special features and functions, and building on application knowledge and experience.

Grundfos iSOLUTIONS allows easy integration of pumps, drives, measurements, controls, protections, and communication, saving you valuable engineering, installation and commissioning time.

Sensors

MLE is sensor-independent and controls the pump to any measured feedback.

Grundfos offers several sensors to be used in pump solutions:

- pressure sensors
- temperature sensors
- differential pressure sensors
- differential temperature sensors
- flow meters.

Grundfos GO Remote

Grundfos GO Remote for iOS and Android ensures easy and quick commissioning, monitoring and servicing of pumps with MLE motors.

Vibration Isolation

Common vibration concerns with frame mounted end suction pumps

- Misalignment between motor shaft and pump shaft is the #1 source of pump vibration
 - o End suction pumps typically have large over-hung impellers with high rotating inertia, that when misaligned creates large unbalanced forces and results in vibration
 - o Offset discharge throat of the volute creates the radial load
 - o Decreased component life
- End suction pump bearing loading is primarily from radial forces

Unbalanced forces and increased vibration

Grundfos CR Multistage pump benefits:

- Register fit between motor and pump
- No alignment required for lifetime of operation
- Minimized vibration
- Longer component life
- Quiet operation (product lubricated pump bearings)
- CR Multistage pumps offer the lowest rotating inertia compared to most other pumps in same duty conditions
- Low rotating inertia equals less opportunity for vibration
- Multistage pump bearing loading is on average 10% radial and 90% axial forces

No alignment is required

Pump systems with Grundfos CR(E) Multistage pumps

- Vibration Isolation:
 - o 1/2" thick dampeners at pump base mounting points (4 per pump)
 - o Inertia bases and grouting are not required when mounted to concrete housekeeping pad
 - o Flexible connectors on manifold connections are recommended
